THE TRAINING EXTRACT

The enclosed Training Extract has been compiled to assist you in making training decisions. It is comprised of a series of computer printouts which show data collected from your specialty. By learning to understand this document and how it applies to training programs, you will find it to be a valuable source of information.

READING THE TRAINING EXTRACT

TABLE OF CONTENTS: The first page of the Training Extract lists a Table of Contents. The Table of Contents reports five things:

1. Report Number - shows the number and sequence of computer products in the Training Extract.

2. Element - shows the report ID of each computer product in the Training Extract. These numbers are of use only to OMSQ personnel.

3. Program - shows the types of computer products included in the Training Extract. Usually there will be three types listed: (1) PRTMOD, (2) VARSUM, and (3) PRTFAC. Each type of printout will be discussed in more detail below.

4. Report Title - describes the general contents of each computer product included in the Training Extract.

5. Page Number - shows the page on which the respective products begin. These numbers are located at the bottom center of the page.

TYPES OF COMPUTER PRODUCTS:

   PRTMOD: This computer product can display occupational survey data in a variety of ways. Primary displays included in most Training Extracts are:

        (1) in job inventory order (by duty)
        (2) in STS order
        (3) in POI order

   The first page of each PRTMOD contains information which is useful primarily to OMSQ Analysts. Of primary interest to the user is the "Description of Reported Task Factors" section at the bottom of the page. This section lists the full titles and the number of members in each data group represented across the various columns of the printout. The actual data display begins on page 2 of the individual printout. This page begins with an introductory paragraph which describes the type of data contained in the product. The actual data follows the introductory paragraph. For information on groups or task factors displayed in the column headings, refer to the listing on page 1. When a column heading describes a group of incumbents, the numbers listed below represent the percent of group members who are performing the task listed at the left-hand side of the page . Where the column heading describes a task factor such as Training Emphasis, Task Difficulty, or Automated Training Indicator (ATI), the numbers below represent the value of that task factor for the given task.

   Training emphasis refers to the importance of providing training of the given task in some type of formal structured training program, such as resident technical training schools, field training, or formal OJT. It only applies to recommended training for first-enlistment personnel (those with 1-48 months TAFMS) or, in the case of lateral career ladders, first-assignment or first-job personnel (those with 1-48 months TICF). It does not apply when examining advanced courses for a career ladder. Tasks which senior career ladder personnel believe should be trained for first-enlistment personnel have high training emphasis values, while those tasks which they believe do not require formal training have low training emphasis values.

Task difficulty refers to the length of time required for the average job incumbent to learn to perform a task. Task difficulty ratings are always standardized so that tasks having average task difficulty have a mean of 5.0. Tasks with values above 5.0 are considered more difficult to learn than those with values below 5.0.

VARSUM: While the PRTMOD product provides data on the various tasks being performed, the VARSUM product presents information concerning the responses of career ladder incumbents to the various background questions in the job inventory. Page 1 of the VARSUM lists the groups which are displayed on the product, showing a group ID number, group title, and number of people in the group. These group identities define the groups which comprise the column headings on each page of the VARSUM product. Along the left-hand side of each page, you will see a series of variable numbers, followed by their respective descriptions (i.e. V0000 Equip Used - Automatic Film Processors). Each variable represents a response to a background question. For background questions which allow multiple responses, each response is given below the variable number. In most cases, only the "yes" responses will be displayed. The numbers to the right of each response represent the percentage of the given group (as identified on the first page of the product) who gave that particular response to the question.

PRTFAC: This product is very similar to the PRTMOD in that it displays percentages of people performing tasks, as well as Training Emphasis, Task Difficulty, and Automated Training Indicator (ATI) data. The PRTFAC product however, is used to display task data in descending order of some task factor, such as training emphasis. The two primary PRTFAC products included in the Training Extract display inventory tasks in descending order of Training Emphasis value, and inventory tasks in descending order of the computed Automated Training Indicator (ATI) value.

To help in interpreting Training Emphasis ratings shown on several of the data products, standardized abbreviations are used. These abbreviations are as follows:

```
MEAN = Average Training Emphasis Rating
1 SD = 1 Standard Deviation above Mean Training Emphasis Rating
2 SD = 2 Standard Deviations above Mean Training Emphasis Rating

ABOVE AVG = "ABOVE AVERAGE" in Training Emphasis; Tasks that fall between the Mean and 1 SD
HIGH = "HIGH" in Training Emphasis; Tasks that fall between 1 SD and 2 SD
VERY HIGH = "VERY HIGH" in Training Emphasis; Tasks that fall above 2 SD
```

This document has been designed and prepared as a final summary document containing data printouts which were used in analyzing the occupational survey data collected on this AFSC. We hope this brief summary assists you in utilizing the data presented in this Training Extract. If you need additional information that is not contained in this Extract, please feel free to contact one of our analysts at DSN 487-6811 for assistance.

AFSC 1A3X1 tasks are presented in USAF Job Inventory order under
Duty headings.

The percent of TAFMS/DAFSC group members performing each task,
as well as task difficulty and training emphasis ratings, are
presented to the right of each task.

Note that tasks are listed in alphabetical order under each Duty
heading so that tasks may be easily located and cross-referenced.
Differences between groups may be highlighted where there are large
differences in percent members performing each task across the
various groups.

STS 1A3X1, Airborne Communications Systems, dated October 2000,
is presented below with matched job inventory tasks and occupational
survey data.

STS items are listed below the dotted line, followed by a listing of
matched tasks. Pertinent survey data are printed to the right of each
task. This printout is extremely useful during utilization and training
workshops (U&TWs) to validate STS content and in determining appropriate
training codes for STS items. In addition, tasks which were not matched
to any STS item are listed in a "Tasks Not Referenced" section at the end
of the printout. These unreferenced tasks should be carefully reviewed to
identify new areas which may warrant inclusion in the STS. For assistance
in interpretation of this printout, contact AFOMS/OMYO, at DSN 487-6811.

STS 1A3X1, Airborne Communications Systems, dated October 2000,
is presented below with matched job inventory tasks and occupational
survey data.

STS items are listed below the dotted line, followed by a listing of
matched tasks. Pertinent survey data are printed to the right of each
task. This printout is extremely useful in identifying task
differences across the various MAJCOMs. This information can be used
during utilization and training workshops (U&TWs) to validate STS
content and determine appropriate training codes for STS items. This
printout can also be used to decide which tasks should be included in
the STS or be placed in MAJCOM JPGs or MAJCOM-specific training packages.
In addition, tasks which were not matched to any STS item are listed in
a "Tasks Not Referenced" section at the end of the printout. For
assistance in interpretation of this printout, contact AFOMS/OMYO at
DSN 487-6811.

AFSC 1A3X1 tasks are presented below in descending order of first
term training emphasis ratings, together with the percent of first-job and
first-enlistment incumbents performing each task, and the relative task
difficulty ratings.

Training emphasis ratings were collected from 38 experienced career ladder
NCOs (primarily E-6s and E-7s) who worked in a variety of commands and
locations. These NCOs rated job inventory tasks on a 10-point scale ranging
from zero (no training required) to nine (extremely high training emphasis
recommended). Overall, the 38 raters had acceptable agreement as to which
tasks require some form of structured training during the first enlistment.

In this career ladder, the average training emphasis rating was 1.71, with
a standard deviation of 1.31. Tasks rated above 3.02 are high in training
emphasis and should be seriously considered for inclusion in the basic
resident course. Tasks rated below 0.40 generally are more appropriately
trained by OJT rather than in the formal basic resident course.

AFSC 1A3X1 task difficulty ratings are presented below in descending
order, along with the percent members performing for various career ladder
groups. Also presented are first-term training emphasis ratings.

Each of the 34 experienced NCOs selected to complete task difficulty
booklets rated each job inventory task on a nine-point scale from (1)
extremely low difficulty to (9) extremely high difficulty. Difficulty
was defined as the length of time it takes an average individual to
learn to do the task. These NCOs were selected from a wide variety of
commands and locations. To make these data easier to use, ratings
were adjusted so that an average task difficulty equaled 5.00 and a
standard deviation of 1.00. Thus, tasks rated below 4.00 are relatively
easy, while tasks rated higher than 6.00 are fairly difficult.

Automated Training Indicators (ATI) are derived
from criterion group percent members performing
(normally 1-48 months TAFMS), Training Emphasis
(TE) and Task Difficulty (TD) data based upon the
Training Decision Logic Table in AETCI 36-2601,
Attachment 2.   Presented is the ATI chart and
corresponding training decisions to be used
as an aid in making training decisions.

For further explanation or assistance, phone
AFOMS/OMYO, at DSN 487-6811.

AFSC 1A3X1 tasks are presented in USAF Job Inventory order under
Duty headings.

The percent of aircraft platform group members performing each task
is presented to the right of each task.

Note that tasks are listed in alphabetical order under each Duty
heading so that tasks may be easily located and cross-referenced.
Differences between groups may be highlighted where there are large
differences in percent members performing each task across the
various groups.

AFSC 1A3X1 tasks are presented in USAF Job Inventory order under
Duty headings.

The percent of primary mission group members performing each task
is presented to the right of each task.

Note that tasks are listed in alphabetical order under each Duty
heading so that tasks may be easily located and cross-referenced.
Differences between groups may be highlighted where there are large
differences in percent members performing each task across the
various groups.

AFSC 1A3X1 tasks are presented in USAF Job Inventory order under
Duty headings.

The percent of primary mission group members performing each task
is presented to the right of each task.

Note that tasks are listed in alphabetical order under each Duty
heading so that tasks may be easily located and cross-referenced.
Differences between groups may be highlighted where there are large
differences in percent members performing each task across the
various groups.

                          ----- Variable/Group Distributions -----

The percent of reported group members who responded to background questions are
presented under the column headings for the appropriate group. The displayed
data summarizes information about the people in each group.

Reports on the following groups were requested:

AFSC 1A3X1 tasks are presented in USAF Job Inventory order under
Duty headings.

The percent of level of qualification group members performing each
task is presented to the right of each task.

Note that tasks are listed in alphabetical order under each Duty
heading so that tasks may be easily located and cross-referenced.
Differences between groups may be highlighted where there are large
differences in percent members performing each task across the
various groups.
